Come with Your Ideas!

Mission:

The goal of this program is to identify ways to link Bridgeport’s highly diverse neighborhoods through environmentally sustainable features. This could include alternative modes of transportation and complete streets, open space and recreational elements, as well as form-based design, energy efficiency and community recycling efforts. The results should be a cohesive sense of place as a model green city in a former industrial hub.

About SDAT:

The SDAT program is a community assistance program that focuses on the principles of sustainability. SDATs bring teams of volunteer professionals (such as architects, urban designers, planners, hydrologists, economists, attorneys, and others) to work with community decision-makers and stakeholders to help them develop a vision and framework for a sustainable future.
